

ABDELRAHMAN BELAL KANAKRI

AI Engineer | Amman, Jordan | +962775218484 | a.b.kanakri@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

AI Engineer specializing in RAG pipelines, multi-agent orchestration, and LLM-powered automation. Proven track record deploying production systems with LangChain/LangGraph and vector search (Supabase/pgvector), improving model accuracy by up to 15%. Experienced across the full AI/ML lifecycle, from CNN-based computer vision (95% accuracy) to conversational AI agents integrating structured and unstructured data sources. DS & AI graduate (4.0 GPA) building agentic AI systems for real-world automation, raised and educated in Abu Dhabi, UAE with continued regional ties.

SKILLS

AI/ML Frameworks & Concepts: LangChain · LangGraph · RAG (Retrieval-Augmented Generation) · Multi-Agent Systems · TensorFlow · Scikit-learn · NLP · Computer Vision (CNN) · HuggingFace

Programming Languages: Python · SQL

Tools & Infrastructure: Vector Databases (Supabase/pgvector) · Git

EXPERIENCE

Teaching Assistant & Lab Infrastructure Engineer | Irbid National University | Irbid, Jordan April 2026 – Present

- Integrated MeshCentral with an AI layer for real-time monitoring across **170 devices**, automating anomaly detection during exams and academic sessions and cutting manual monitoring by **~5 hours per workday**.
- Developed a license-plate detection system distinguishing registered from unregistered vehicles for campus access control, achieving **94% detection accuracy**.

CTO AI Engineer | HyvenTechnology | Amman, Jordan December 2025 – February 2026

- Built a customer-support chatbot in Python using LangGraph, deployed via Telegram, to automate customer inquiry handling.
- Engineered a custom computer vision system for real-time object detection and analysis.

Data Scientist Trainee | Correlation One Fellowship Program | Remote October 2024 – March 2025

- Applied Python/SQL for complex data querying, analysis, and modeling preparation across a **~10K-row dataset**.
- Delivered a **15%** improvement in model accuracy applying ML techniques to real-world data challenges.

PROJECTS

Personal Search Assistant | Personal Project | [GitHub](#) Jul 2026

- Built a LangGraph research agent with cross-session memory and human-in-the-loop approval checks prior findings, fills gaps via live Tavily web search, and produces a cited Markdown answer that persists on approval for reuse in future runs.
- Engineered dual entry points — an async CLI and a FastAPI SSE streaming API — backed by a Postgres-based LangGraph checkpointer and cross-session store, with `@tool`-decorated functions exposed to the LLM.
- Containerized with Docker; structured JSON logging, pydantic-settings config, and pytest unit/integration test coverage.

Smart Recycler (AI Smart Recycling) | Graduation Project, Irbid National University | [GitHub](#) February 2025

- Iteratively improved a waste-image classifier from a baseline CNN to 95% accuracy via transfer learning (VGG16, ResNet50), data augmentation, and fine-tuning on a 15,000-image Kaggle dataset.
- Layered an LLM (DeepSeek-R1) on the classifier's output to generate consumer-behavior insights from waste-disposal patterns.

EDUCATION

Bachelor's Degree, Data Science & AI | Irbid National University, Irbid, Jordan | GPA 4.0 September 2025

CERTIFICATIONS

Introduction to LangGraph | Python, LangChain Academy (June 2026)

Introduction to LangChain | Python, LangChain Academy (April 2026)

Automation & AI Agents (n8n) | Robotna (September 2025)

Advanced Data Analytics | Correlation One (March 2025)
